## OPHTHALMOLOGY

The registry of amniotic membrane outcomes in Ophthalmology (ROMEO Ophthalmology) is a platform for eye care specialists to record, collate and audit anonymised procedural and clinical data specific to the use of amniotic membrane.

ROMEO Ophthalmology allows you to:

### Clinically Evaluate

Monitor and benchmark real-world amniotic membrane transplantation clinical and safety outcomes in your hospital.

### Track Application Diversity

Understand clinical pathway patterns and monitor quality of care involving amniotic membrane transplantation.

### Regulatory Surveillance

Identify and capture unreported regulatory events outside of the standard mandatory process.

### Conduct Research

Access your data at any time, or request interrogation of national data for use in audits, publications, conference presentations and health economic assessments.

### Standardise Use

Refine amniotic membrane transplantation procedures in the wider ophthalmology network to improve clinical strategy and develop guidelines.

## How do I sign up?

Visit: <http://romeo.e-dendrite.com> to register and start record your data

ROMEO Ophthalmology stores information in a method compliant with:

- ISO20000
- ISO9001
